DAT for Selection assesses different types of ability, or aptitude, which can be related to success in different areas of employment. Normative data is provided for Verbal Reasoning, Numerical Reasoning as well as for the combined score called, Educational Aptitude.

The DAT Tests

Verbal Reasoning

The Verbal Reasoning test measures the ability to see relationships among words. The test consists of analogies. Each analogy has two words missing - the first word in the first relationship and the second word in the second relationship. Thus the test assesses the ability to infer the relationship between the first pairs of words and apply that relationship to the second pair.

The Verbal Reasoning test may be useful in helping to predict success in academic courses as well as in many occupations, including business, law, education, journalism and the services.

Numerical Reasoning

The Numerical Reasoning test measures the ability to perform mathematical reasoning tasks. In order to ensure that reasoning rather than computational facility is stressed, the computational level of the problems is low.

Numerical reasoning is important for success in such courses as mathematics, physics, chemistry and engineering. The ability to reason with numbers is also important in many occupations, such as sales management, marketing, social sciences and research.

Educational Aptitude

The combined Verbal and Numerical Reasoning score is a powerful measure of general educational aptitude or the ability to learn from books and teachers and to perform well in academic subjects.
