

**Verify Ability Test
Report**

Name: **Sample Person**

Date: 29 November 2012

> Ability Test Report

This Ability Test Report provides the score from Mr Sample Person's Verify Ability Test. If this test was unsupervised, there is a small possibility that this score does not represent his actual level of ability. **A Verification Test is recommended to verify this score.** (See the following page for guidance.)

If this test was administered without supervision, a Verification Test is recommended to determine if this result can be used with confidence.

➤ Guidelines for using these results

If the results in this report were obtained from tests completed without supervision a Verification Test is recommended to confirm this individual's test results.

The Verification Test is shorter than the original Ability Test. It must be administered in a supervised setting and will determine if the result of the Ability Test is **Verified** or **Not Verified**. A Verified result can be used with confidence.

➤ How to verify a result

There are many ways to confirm an individual's ability level. Some techniques are listed below:

Administer a Verification Test	Administering a supervised Verification Test is the most consistent way to verify the original test results. This is strongly recommended.
Consider information from other competency assessments	Use results from other assessments that relate to the competencies and/or skills important for performance in the job to evaluate the person's actual ability level. For example work simulations, or assessment centres.
Use information from other sources	Results from examinations, qualifications, grades and other attainment tests that are appropriate measures of a person's cognitive ability may help to evaluate the person's actual ability level.
Use structured interviewing techniques to probe related competencies	Competencies related to cognitive ability include: <ul style="list-style-type: none">• Presenting & Communicating Information• Writing & Reporting• Applying Expertise & Technology• Analysing• Learning & Researching• Creating & Innovating• Formulating Strategies & Concepts

The final decision on how to confirm and use the person's test results should follow internal policies and guidelines. Companies should evaluate the risks involved, corporate policy/governance, the use of other screening and selection tools, time, cost and other factors. All of these may be important when deciding the most appropriate method to verify an individual's Ability Test results.

> Information about this report

How to interpret this information

- The **bar chart** displays the individual's percentile score from the Ability Test.
- The **comparison group** identifies the specific group of people this person's score is compared against.
- The **percentile score** indicates how well this person scored against the people in the comparison group.
- For example, a percentile score of 50 means that the individual performed better than 50% of the people in the comparison group.

About cognitive ability tests

Cognitive ability is the most effective, single predictor of future performance in many different jobs. However, many other factors also play an important role in predicting job performance. The information in this document should be used as part of a broader evaluation of this person's suitability and potential for the job.

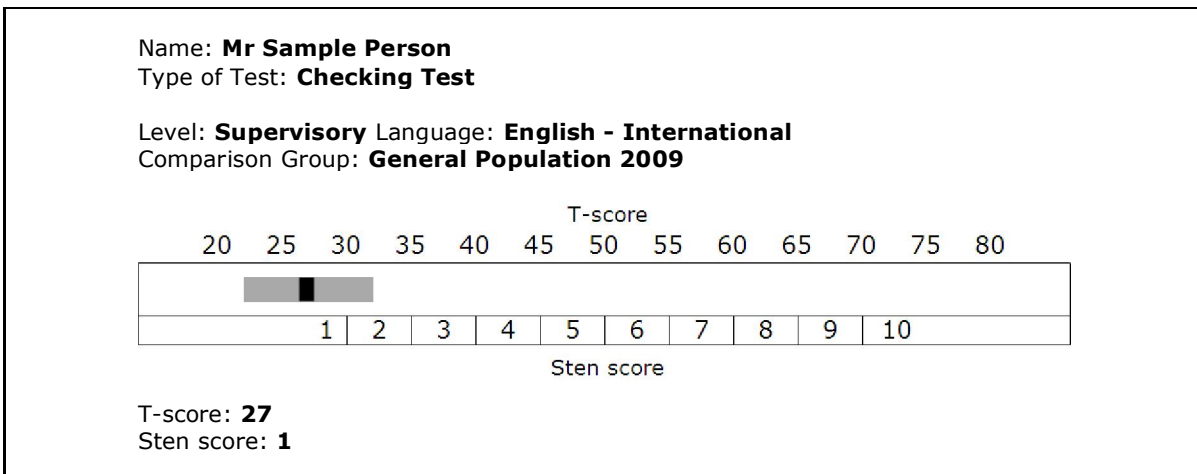

More Information

Additional information and guidance on how to use the SHL Verify range of Ability Tests is available online at www.shl.com.

> Technical information

T-scores and Sten scores are provided for users who are trained in their appropriate use and interpretation.

A T-score is a standardised test score with a mean of 50 and a standard deviation of 10. The Sten score is a standardised score on a 10-point scale. It has a mean of 5.5 and a standard deviation of 2.
